OHS (OH Airglow Suppressor)

● OHS vs. CISCO

Following figures are the results of the test observations carryed out on May23(OHS) and May24(CISCO). Although there are several airglow lines remaining in the "OHS sky" frame, the performance of the OHS is quite obvious. The Oxygen band-emissions are not rejected because these lines are broad and could not separate on the airglow-mask. The other remaining airglow-lines will be rejected by the next airglow-mask already prepared.
